

ENERGY MANAGEMENT POLICY

Kochi Metro Rail Limited (KMRL) is committed to ensure responsible energy management as part of an overall environmental strategy. This Energy Management Policy is a strategic blueprint intended to proactively guide energy use for the Transportation System in a sustainable, cost-effective and efficient manner.

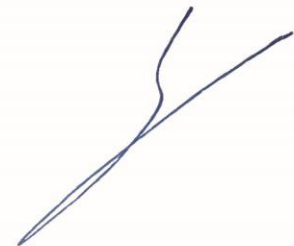

The Policy complements the Metro Energy and Sustainability Policy, focusing on electricity for rail vehicle propulsion, electricity for station utilities and maintenance facilities.

KMRL is prioritizing optimisation of consumption of clean, environment friendly energy with lowest rate of energy consumption in comparison with similar transportation systems. All Central and State rules & regulations and laid down legislation relevant to the energy management system are committed to be followed.

The policy aims at encouraging the use of renewable energy resources and bring out methods so as to reduce the emission of greenhouse gases. The strategy is to achieve cost reduction in power consumption by using energy efficient equipment, power factor improving devices and photosensitive devices.

KMRL aims to benchmark energy consumption. It identifies opportunities to reduce energy consumption and realize cost savings through energy audit and implement low cost operational initiatives and cost effective capital retrofits. It also aims for an optimal organizational structure and approach for effective implementation of an Energy Management Program.
